Application Systems Development - Electronic Document Management

### Purpose:
Collaborates with EDI team on solutions by analyzing requirements, designing, developing and implementing complex or multiple software applications.

Provides solutions by analyzing requirements, designing, developing and implementing complex or multiple software applications. Typically responsible for leading analysis process for complex projects.

Provides direction, leads analysis, design, development and implementation activities for multiple projects with complex business and technical problems. Leads application planning.

Leads, manages and coordinates the development, deployment and ongoing operations of team systems and services. Sets team direction and goals in alignment with CUIT strategic plan and goals.

Manages staff and relevant teams while also leading and coordinating all levels of activities including project life cycle, software development life cycle and day to day operations. Including staff management.

Manages staff and relevant teams while also leading and coordinating all levels of activities including project life cycle, software development life cycle and day to day operations. Including staff management.

Works independently while leading and coordinating all levels of activities including project life cycle, software development life cycle and day to day operations.

Works closely with CUIT colleagues on all tasks in the development and maintenance life cycle. May be responsible for monitoring the work of team members and or project teams.

Works closely with CUIT colleagues on all tasks in the development and maintenance life cycle. May be responsible for monitoring the work of team members and or project teams.

Works closely with CUIT colleagues on all tasks in the development and maintenance life cycle. May be responsible for monitoring the work of team members and or project teams.

### Relation to Supervision:
Works under minimal direction

Works under moderate direction

Works under moderate direction

### Development:
Complies with development standards while developing applications on moderately complex projects, components and subsystems.

Complies with development standards while developing applications on moderately complex projects, components and subsystems.

Complies with development standards while developing applications on moderately complex projects, components and subsystems.

### Education & Experience:
Bachelors degree and/or its equivalent required. Minimum 3-5 years related experience. Familiarity with systems development lifecycle.

Bachelors degree and/or its equivalent required. Minimum 4-6 years related experience. Strong experience with full applications development lifecycle.

Bachelors degree and/or its equivalent required. Minimum 4-6 years related experience. Strong experience with full applications development lifecycle.

### Soft skills:
Demonstrates a variety of competencies including teamwork/collaboration, analytical thinking, organizational skills and strong communication.

Demonstrates a variety of competencies including teamwork/collaboration, analytical thinking, organizational skills and strong communication.

Demonstrates a variety of competencies including teamwork/collaboration, analytical thinking, organizational skills and strong communication.

### Technical Skills:
